C.8. Pontic corpus

The following texts were used as samples of Pontic; they are outlined according to regional provenance, along with approximate word counts in thousands of words. The folk text corpus includes all Pontic prose published in the first twenty issues (1928–1955) of the journal *Αρχεῖον Πόντου* (*Archeion Pontou*).

- Literary Pontic (Chalriot): FotD (16), FotM (16). Although Fotiadis wrote his plays in Akhaltsikhe in Southern Georgia, and spent some time in Athens, I group his language with Chalriot (Fotiadis was born in Kromni of Chaldia).
- Miscellaneous Pontic (no regional attribution given): Parot (16).
- Oinuntiac (21): *Amisos* (6: Valav 1; Valavanis (1928) 2; Valavanis (1934) 3); *Inepolis* (1: Ikonomidis (1958 [1940]) 0.4; Alexiadis (1949) 0.5); *Oinoe* (14: Siviridis (1938) 3; Vamvak 9; Vamvakidis (1939) 2).

C.9. Italiot corpus

The following texts were used as corpora for Italiot:

- *Apulian*: Dizikirikis (0.5), HellSI (1), HDMS 924 (1), RohlfsGRU (1), Lampikis (2), Lefons (1959; 0.4), Palumbo (20; Palumbo's translations into Italiot were not included.)
- *Calabrian*: DGC (23), Falcone (2), HDMS 924 (2), HellSI (0.2), RohlfsGRU (1), TNC (76).

There are thus in all some 26,000 words of Apulian Italiot in the corpus, and some 104,000 words in the Calabrian corpus. For the TNC counts, I have relied on the published concordance, which however does not exhaustively list instances; this is why counts for TNC are frequently given 'at least'-values.

APPENDIX D. TEXTS

The following texts have been cited in this work, with abbreviations as given. For Ancient and Middle Greek, the standard abbreviations are used, according to Liddell–Scott–Jones (1940) (Classical canon) and Lampe (1961) (Patristic/Early Byzantine); where the two conflict, LSJ is given priority. Exceptionally, Aeschylus, Euripides and Sophocles are given as *Aesch*, *Dem*, *Eur* and *Soph*, rather than *A*, *D*, *E* and *S*. The New Testament is cited with the NT prefix, but with Lampe’s abbreviations of individual books rather than Liddell–Scott–Jones’. The abbreviations for Early Modern and Modern Greek works are my own; I have resisted the temptation to follow Psichari and Jannaris in adopting Latinate abbreviations for the EMG canon.

Where the texts appear in the bibliography of Kriaras’ (1969–1993), the bibliographic number given there is quoted after the reference as *Knnnn*; the reader is referred to that work for further bibliographic details. The datings of the Byzantine and early Renaissance texts are taken from Beck (1988 [1971]). Manuscripts are named according to the practice established in the critical edition of the work in question, and denoted by superscript: thus, *Mor^H* is manuscript H (*Havniensis*—Copenhagen) of the Chronicle of Morea, and *Mor^P* is manuscript P (*Parisianus*—Paris) of the same work. Different editions of a work are distinguished by subscript; subscript is also used to denote the manuscript’s original reading, where it differs from the critical edition. Thus, *Ptoch_{H-P}* refers to the Hesseling-Pernot edition of the Ptochoprodromos poems, while *Ptoch_E* refers to the Eideneier edition; *Dig_A^E* refers to the Alexiou edition/ emendation of the Escorial manuscript of Digenis, while *Dig_{MS}^E* refers to the original manuscript reading of the Escorial.
